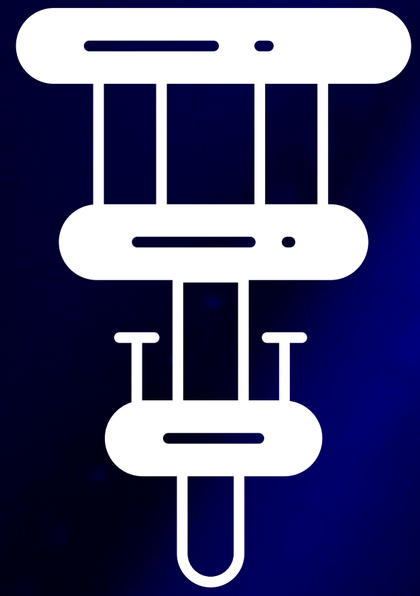
THE THREAT

The Reason:

QUANTUM COMPUTING



Quantum Is No Longer Just a Physics Experiment

The question is no longer: "Will quantum technologies arrive?"

The question is: "Will society be ready when they do?"

Why Security Matters More Than Ever

Most people assume encryption is permanent.

Quantum computers change that equation.

“Harvest now, decrypt later.”

The Quantum Workforce Gap

Shortage of minds who understand how to run it, secure it, or deploy it.

Quantum is no longer just a physics experiment, it’s a commercial, geopolitical, and societal reality.

Innovation scales when it is democratized.

One builds trust, the other builds capability.

We need both. Together.

This time, we have the foresight. We can see the wave coming.

The future of global security, will be decided by the choices we make.

Let’s build a workforce capable of driving it, and a secure world capable of trusting it.

THANK YOU
